PROFESSIONAL SUMMARY

Hardware-Embedded Systems Engineer with a track record of taking technical products from concept to working system. Currently leading a final-year flight controller project from initial scoping through live testing, achieving over 10 minutes of stable flight and 1ms telemetry delivery to ground station. As Vice President of Redeemer's University Technology Space, scaled community initiatives to upskill 200+ students and convened tech communities from 6 universities for a flagship annual event. Looking to bring this combination of engineering rigor, insight, and proven ability to lead and deliver at scale into a product management career.

EDUCATION

B.Eng. Computer Engineering — Redeemer's University 2021 – 2026 (in progress)

- **Relevant coursework:** Computer Architecture, Microprocessor Systems, Digital Logic Design, Embedded Systems, Control Systems, Cryptography Principles & Applications, Technology Policy.

SKILLS

- **Technical Skills:** Microsoft Office, Product documentation, Programming (C and Python among others), Smartphone repairs, Hardware maintenance.
- **Soft Skills:** Teamwork, Leadership, Excellent communication, Innovation, Problem Solving.
- **Interests:** Travelling, Critical thinking and building, Networking, Learning, Reading, Gaming.

PROJECTS

UAV Flight Controller — Final Year Project In Progress

- Identified that the price-to-performance ratio of commercial flight controllers is unfavourable for Nigerian education and research contexts, and led development of a locally reproducible alternative targeting comparable performance at significantly lower cost.
- Made the key architecture trade-off of separating the real-time control layer from the telemetry layer to meet performance constraints without compromising reliability.
- Validated core requirements in live testing: achieved over 10 minutes of stable flight and 1ms telemetry delivery to ground station; benchmarking against the Matek F411 WTE is the next defined evaluation milestone.

Custom F450 UAV — Final Year Project (Evaluation Platform) In Progress

- Recognized the need for real-world flight validation beyond the bench, and scoped a custom F450-class quadcopter as the purpose-built test platform.
- Spotted a power-distribution gap unique to the platform's load profile and designed a custom PDB after evaluating component trade-offs.

Smart Parking Lot System Completed

- Identified a real-world occupancy-management problem and decided on an ESP32-based automated solution, surfacing live slot availability over IoT protocols.
- Validated the solution through iterative testing, improving sensor accuracy and power efficiency to meet reliability requirements ahead of deployment.

EXPERIENCE

Vice President — Redeemer's University Technology Space Aug 2025 – Present

- Secured a partnership with NVIDIA to deliver a hands-on training and certification workshop, upskilling 100 students across the university.
- Organised a community visit to Flutterwave HQ, connecting members with industry experts for a live knowledge-sharing session.
- Hosted a two-week webinar series with alumni of the university, featuring a Senior Solutions Architect at AWS and a Postdoctoral Researcher at the University of Manchester.
- Planned and hosted the 5th Edition of TechFest, welcoming tech communities from 6 universities and multiple departments from across the university, securing sponsorship in cash, merchandise, and mentorship from Flutterwave, VFD Bank, Payaza, AfricaTech Academy, Bank78, Digital Inclusion Initiative, among others.
- Organised and hosted a Hackathon as a flagship event of TechFest, with Payaza as headline sponsor.
- Partnered with DII to secure 100 Coursera course licences for top-performing community members.

Network Intern — MTN Nigeria Aug 2025 – Sept 2025

- Monitored network infrastructure and supported troubleshooting of telecommunications hardware.
- Performed daily power and HVAC checks across the switching center to maintain optimal operating conditions.
- Conducted and documented site audits at critical locations across the state, including the International Conference Centre, University of Ibadan.
- Attended to customer complaints onsite to help improve network performance in affected areas.

Hardware Engineering Intern — Constantlink Technologies Ltd Apr 2025 – Jul 2025

- Diagnosed and resolved complex PCB-level faults across smartphones (Samsung, Infinix, Oppo), desktops, and laptops.
- Delivered solar power solutions for clients, from load calculation to panel and inverter installation.
- Maintained and periodically serviced industrial-grade hardware including inverters, UPS systems, and printers.
